Fired Heater Sizing Program – AI Center

Develop an XL spread sheet model to size fired process heaters using the method described in Chapter 8 of the Gas Processors Suppliers Association Engineering Data Book.

This will require development of a user friendly model with the input and output available to the user and the calculations in the background.

Deliverables include a tested model and a User's Manual. A team of up to three people can work on this project. Start date is early September with completion by April 15.
